

BUILD YOUR FIRST WEBSITE

Presented by:

Maher Nedjem Eddine

Saad Azzem

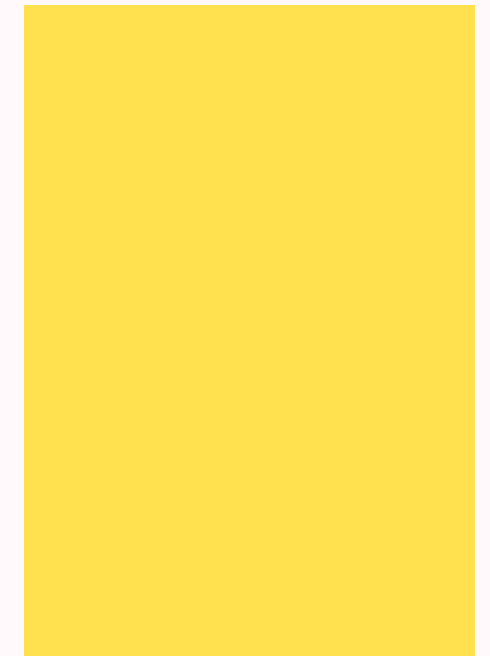

Hello there !

I'M MAHER

A **data scientist**, **AI engineer** and a **web developer**

- **I BUILD** interactive and modern web applications.
- **I EXPLORE** AI, Machine Learning and Data Science.
- **I SHARE** what I learn through workshops and projects.

**GET TO KNOW
ME :**

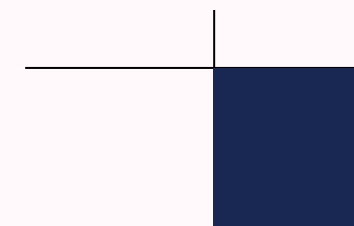

CONTENT

- 1. The Web**
How does it work ?
- 2. HTML**
Building the structure
- 3. CSS**
Styling the website

- 4. Lets Build**
Put everything together
- 5. What's Next ?**
Your next steps in web dev
- 6. Conclusion**
Keep learning. Keep building

THE WEB

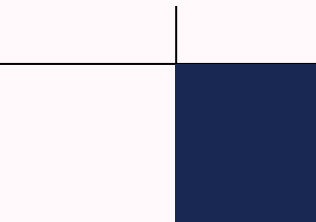

THE WEB

WHAT IS THE INTERNET ?

The **global network** connecting computers and devices around the world.

THE WEB

WHAT IS THE INTERNET ?

The **global network** connecting computers and devices around the world.

WHAT IS THE WEB?

One of the services that runs on the Internet, allowing us to **access websites** through browsers.

HOW DOES IT WORK ?

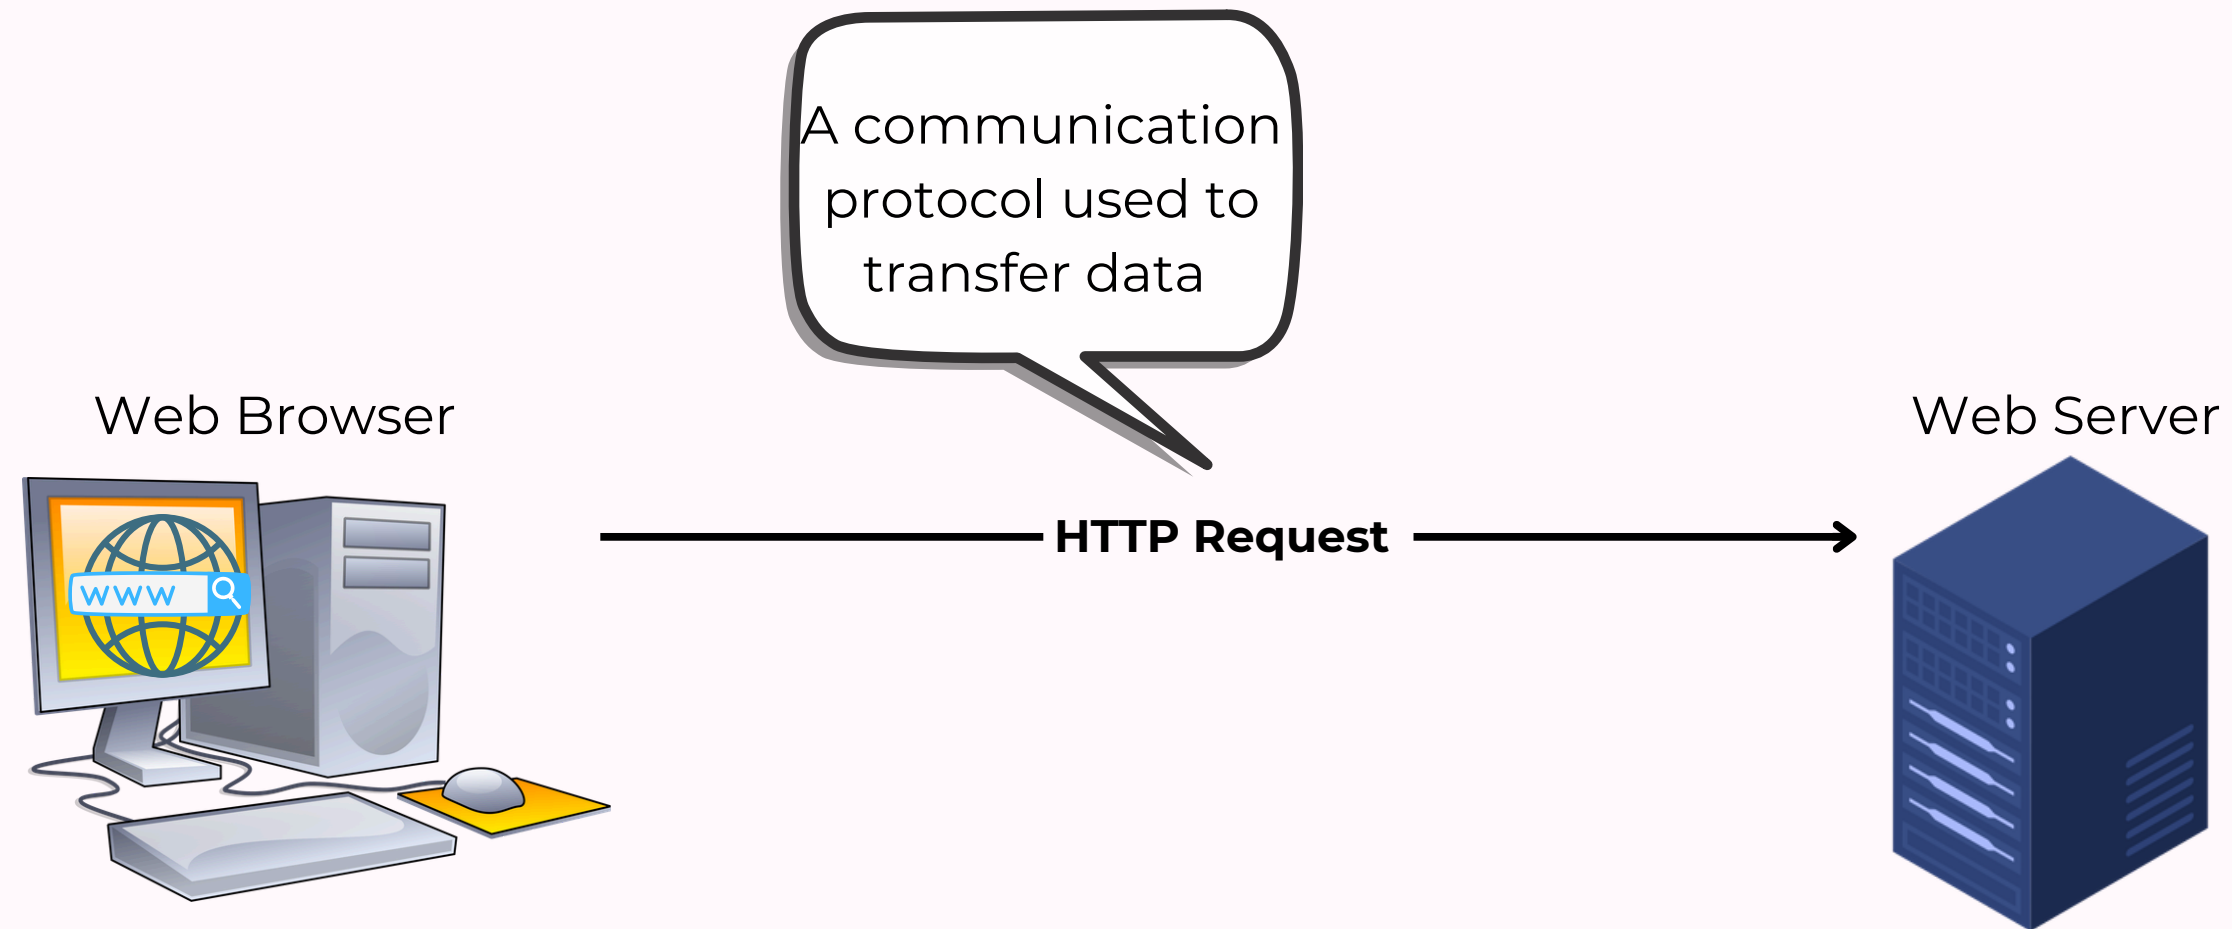

Web Browser

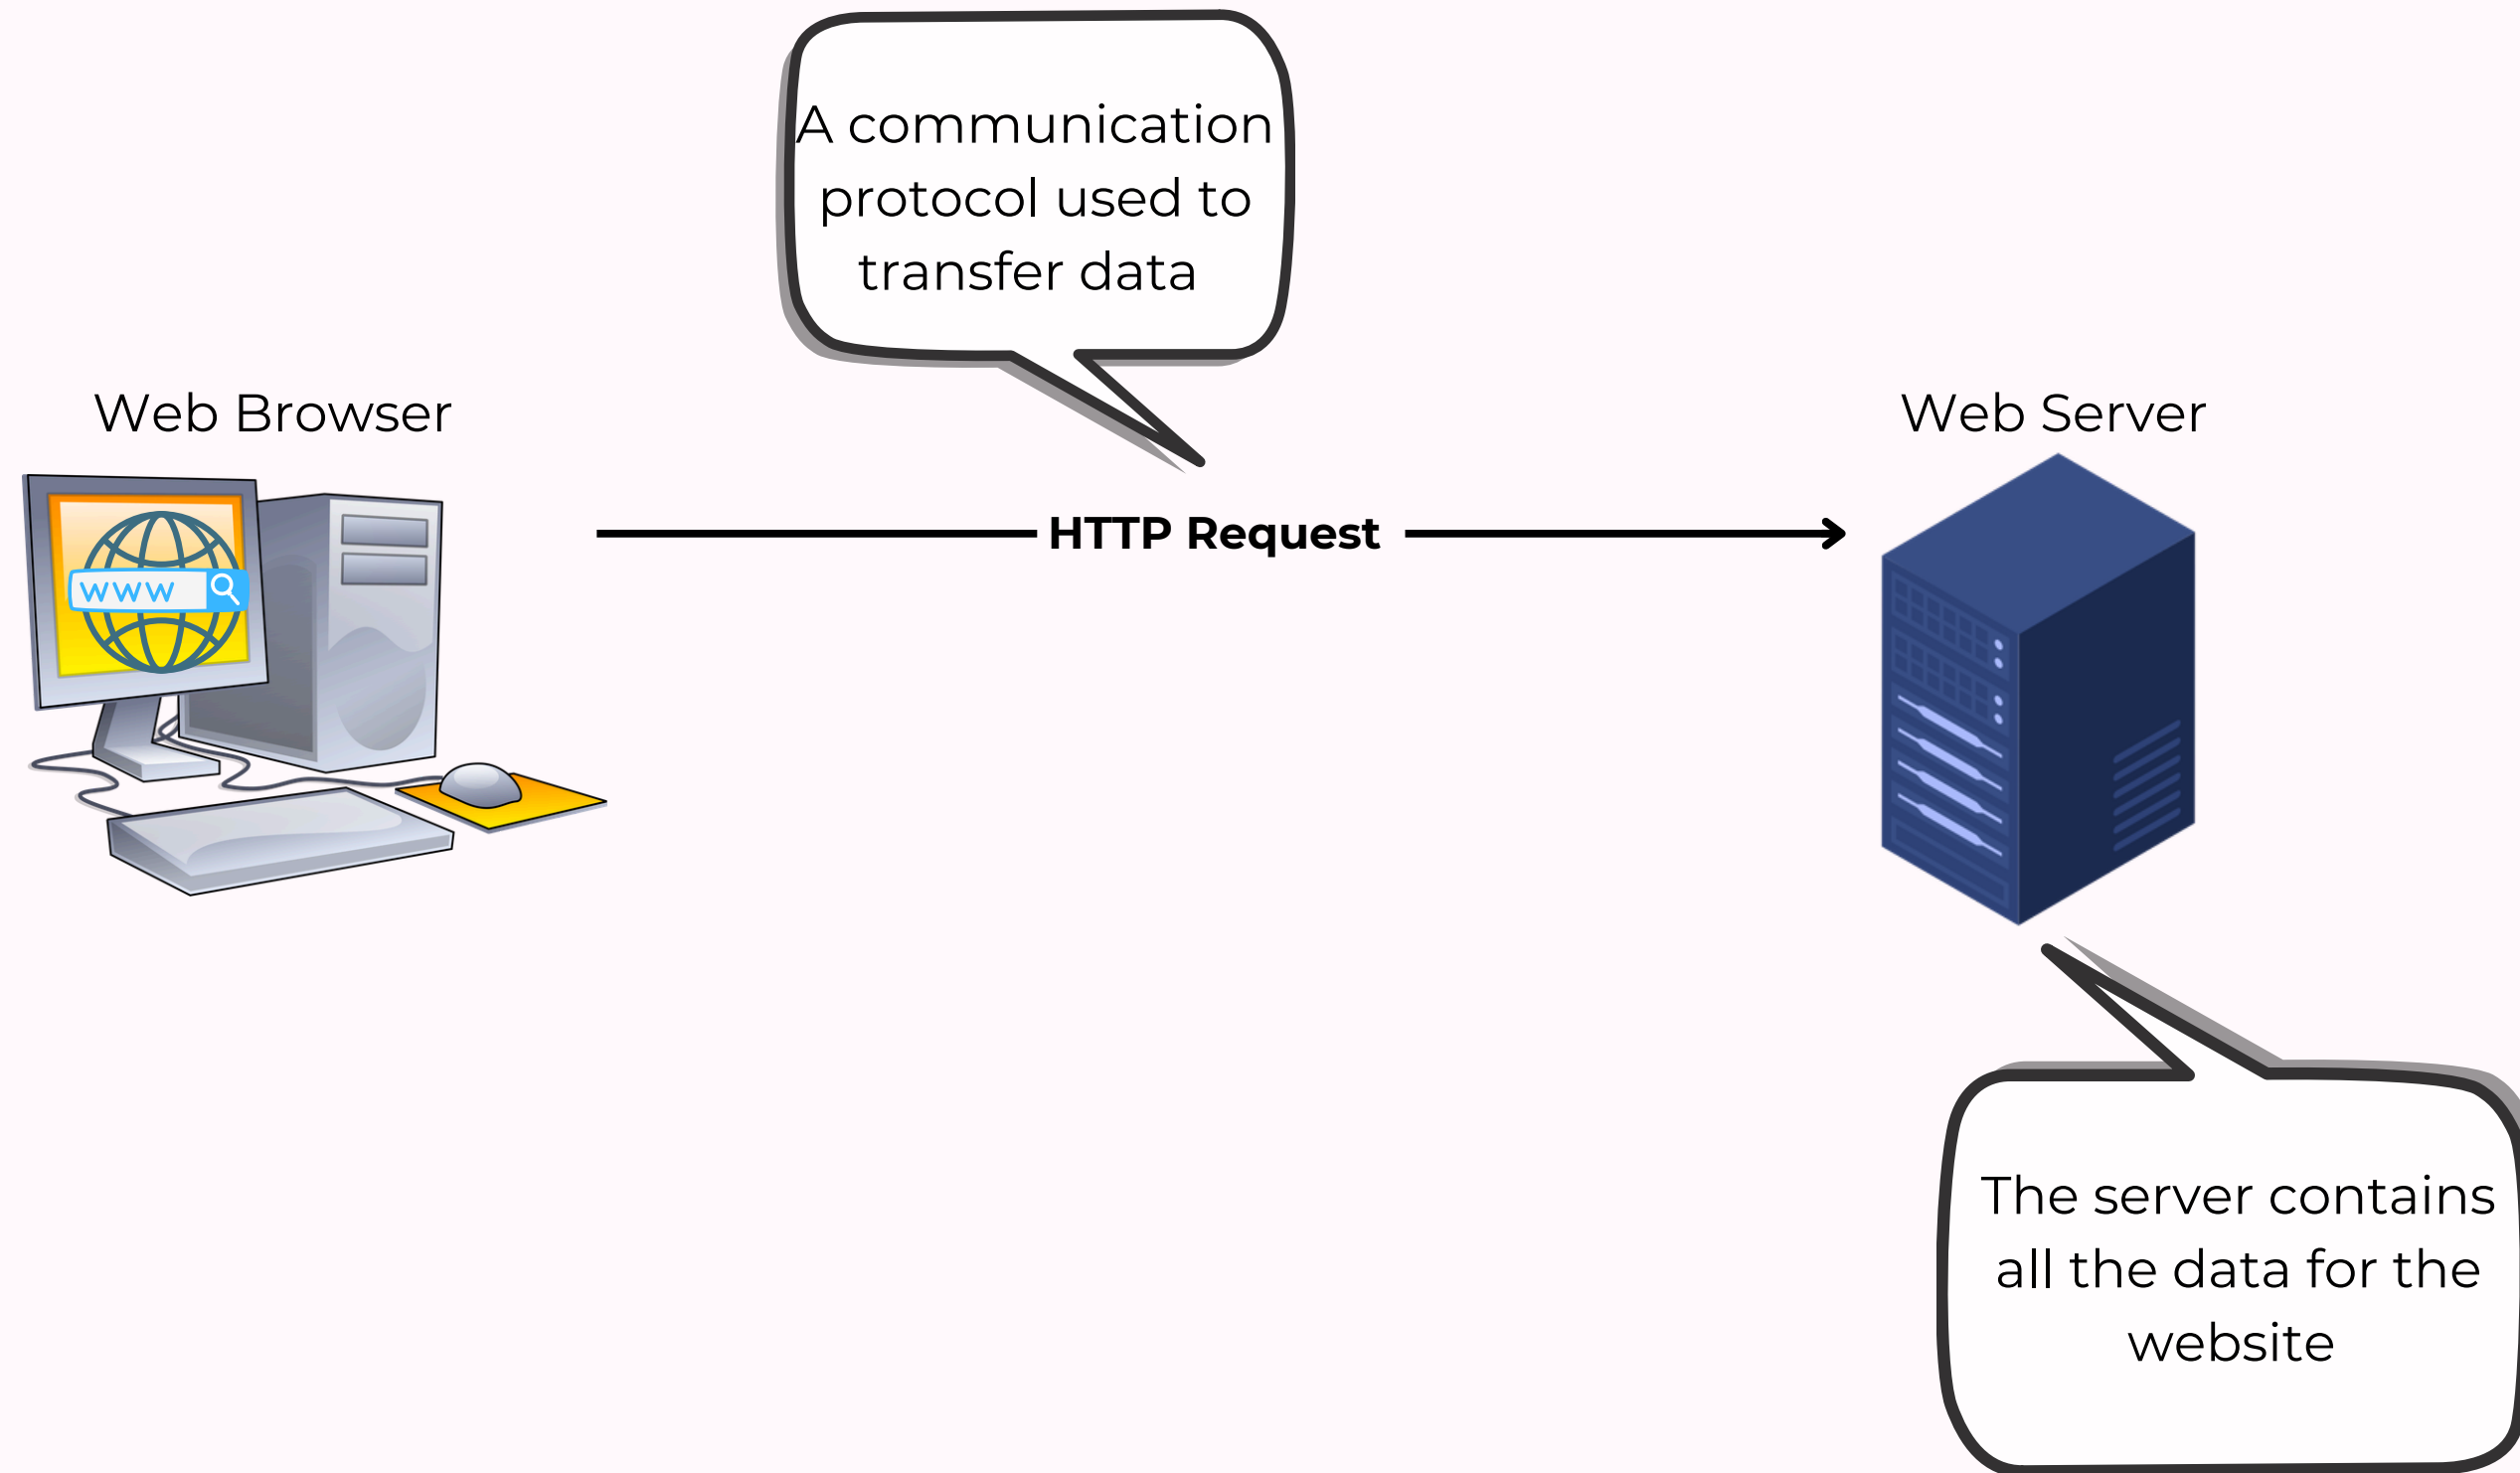

Web Server

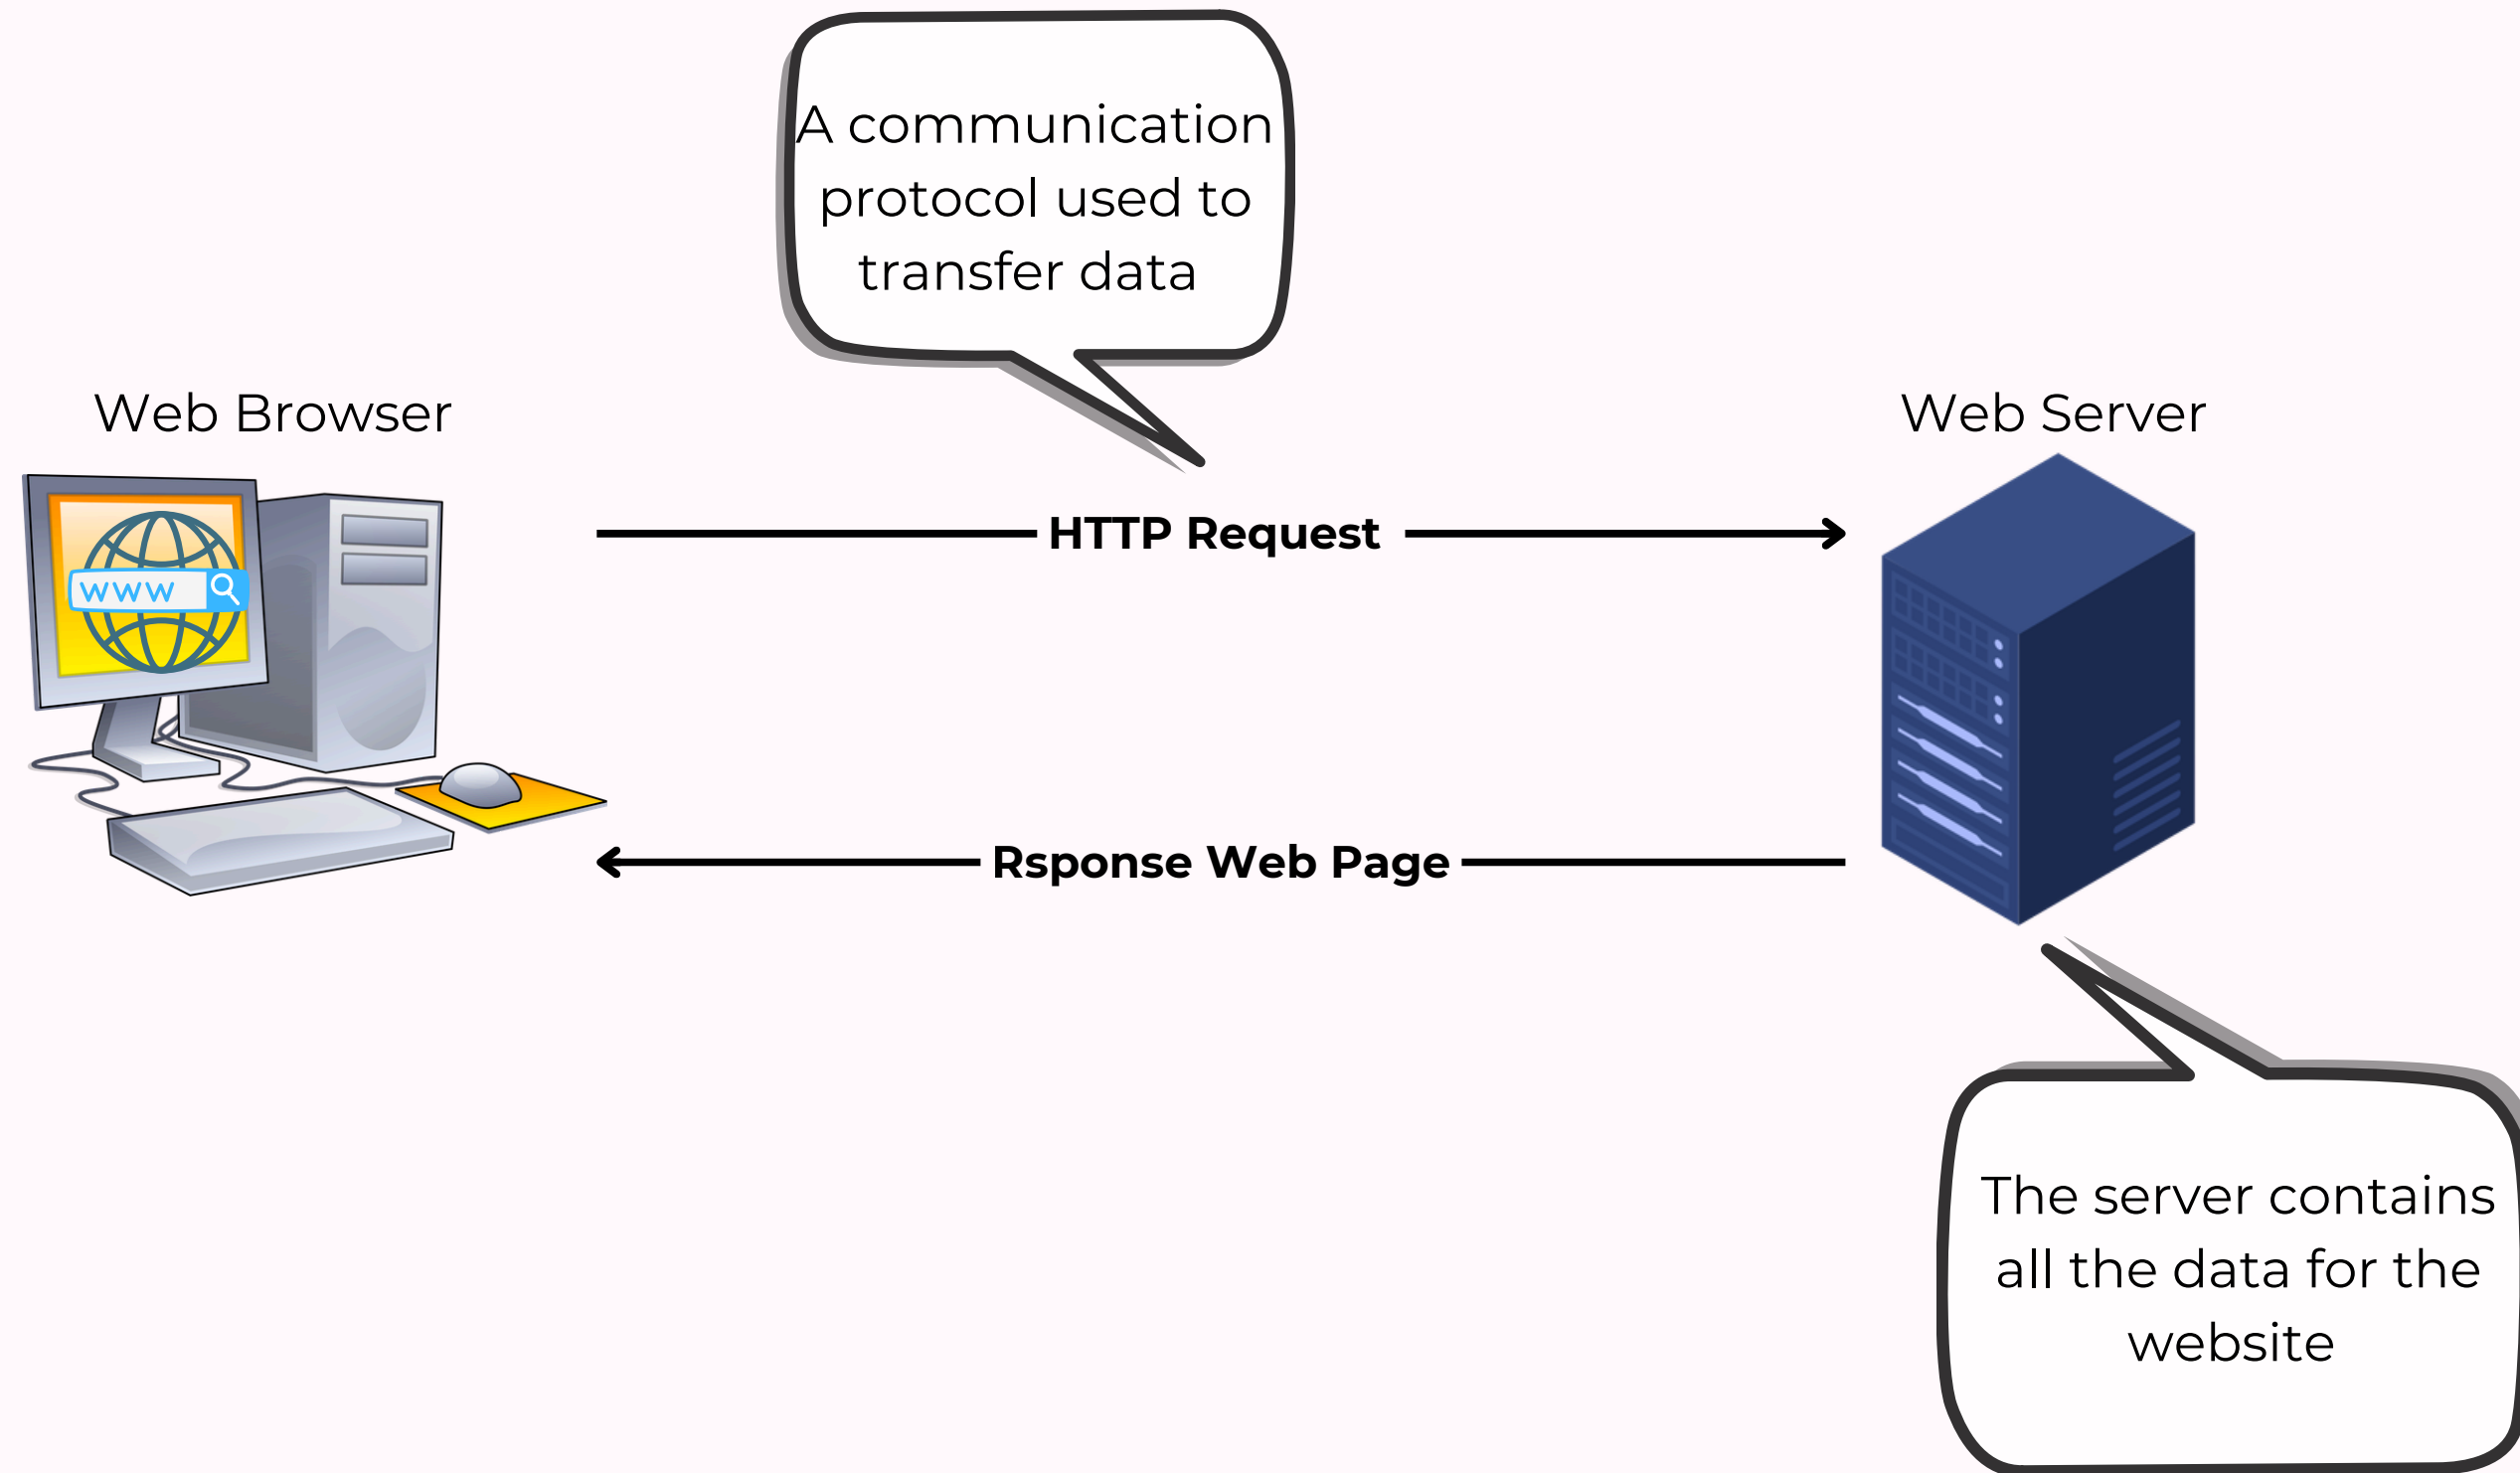

HOW DOES IT WORK ?

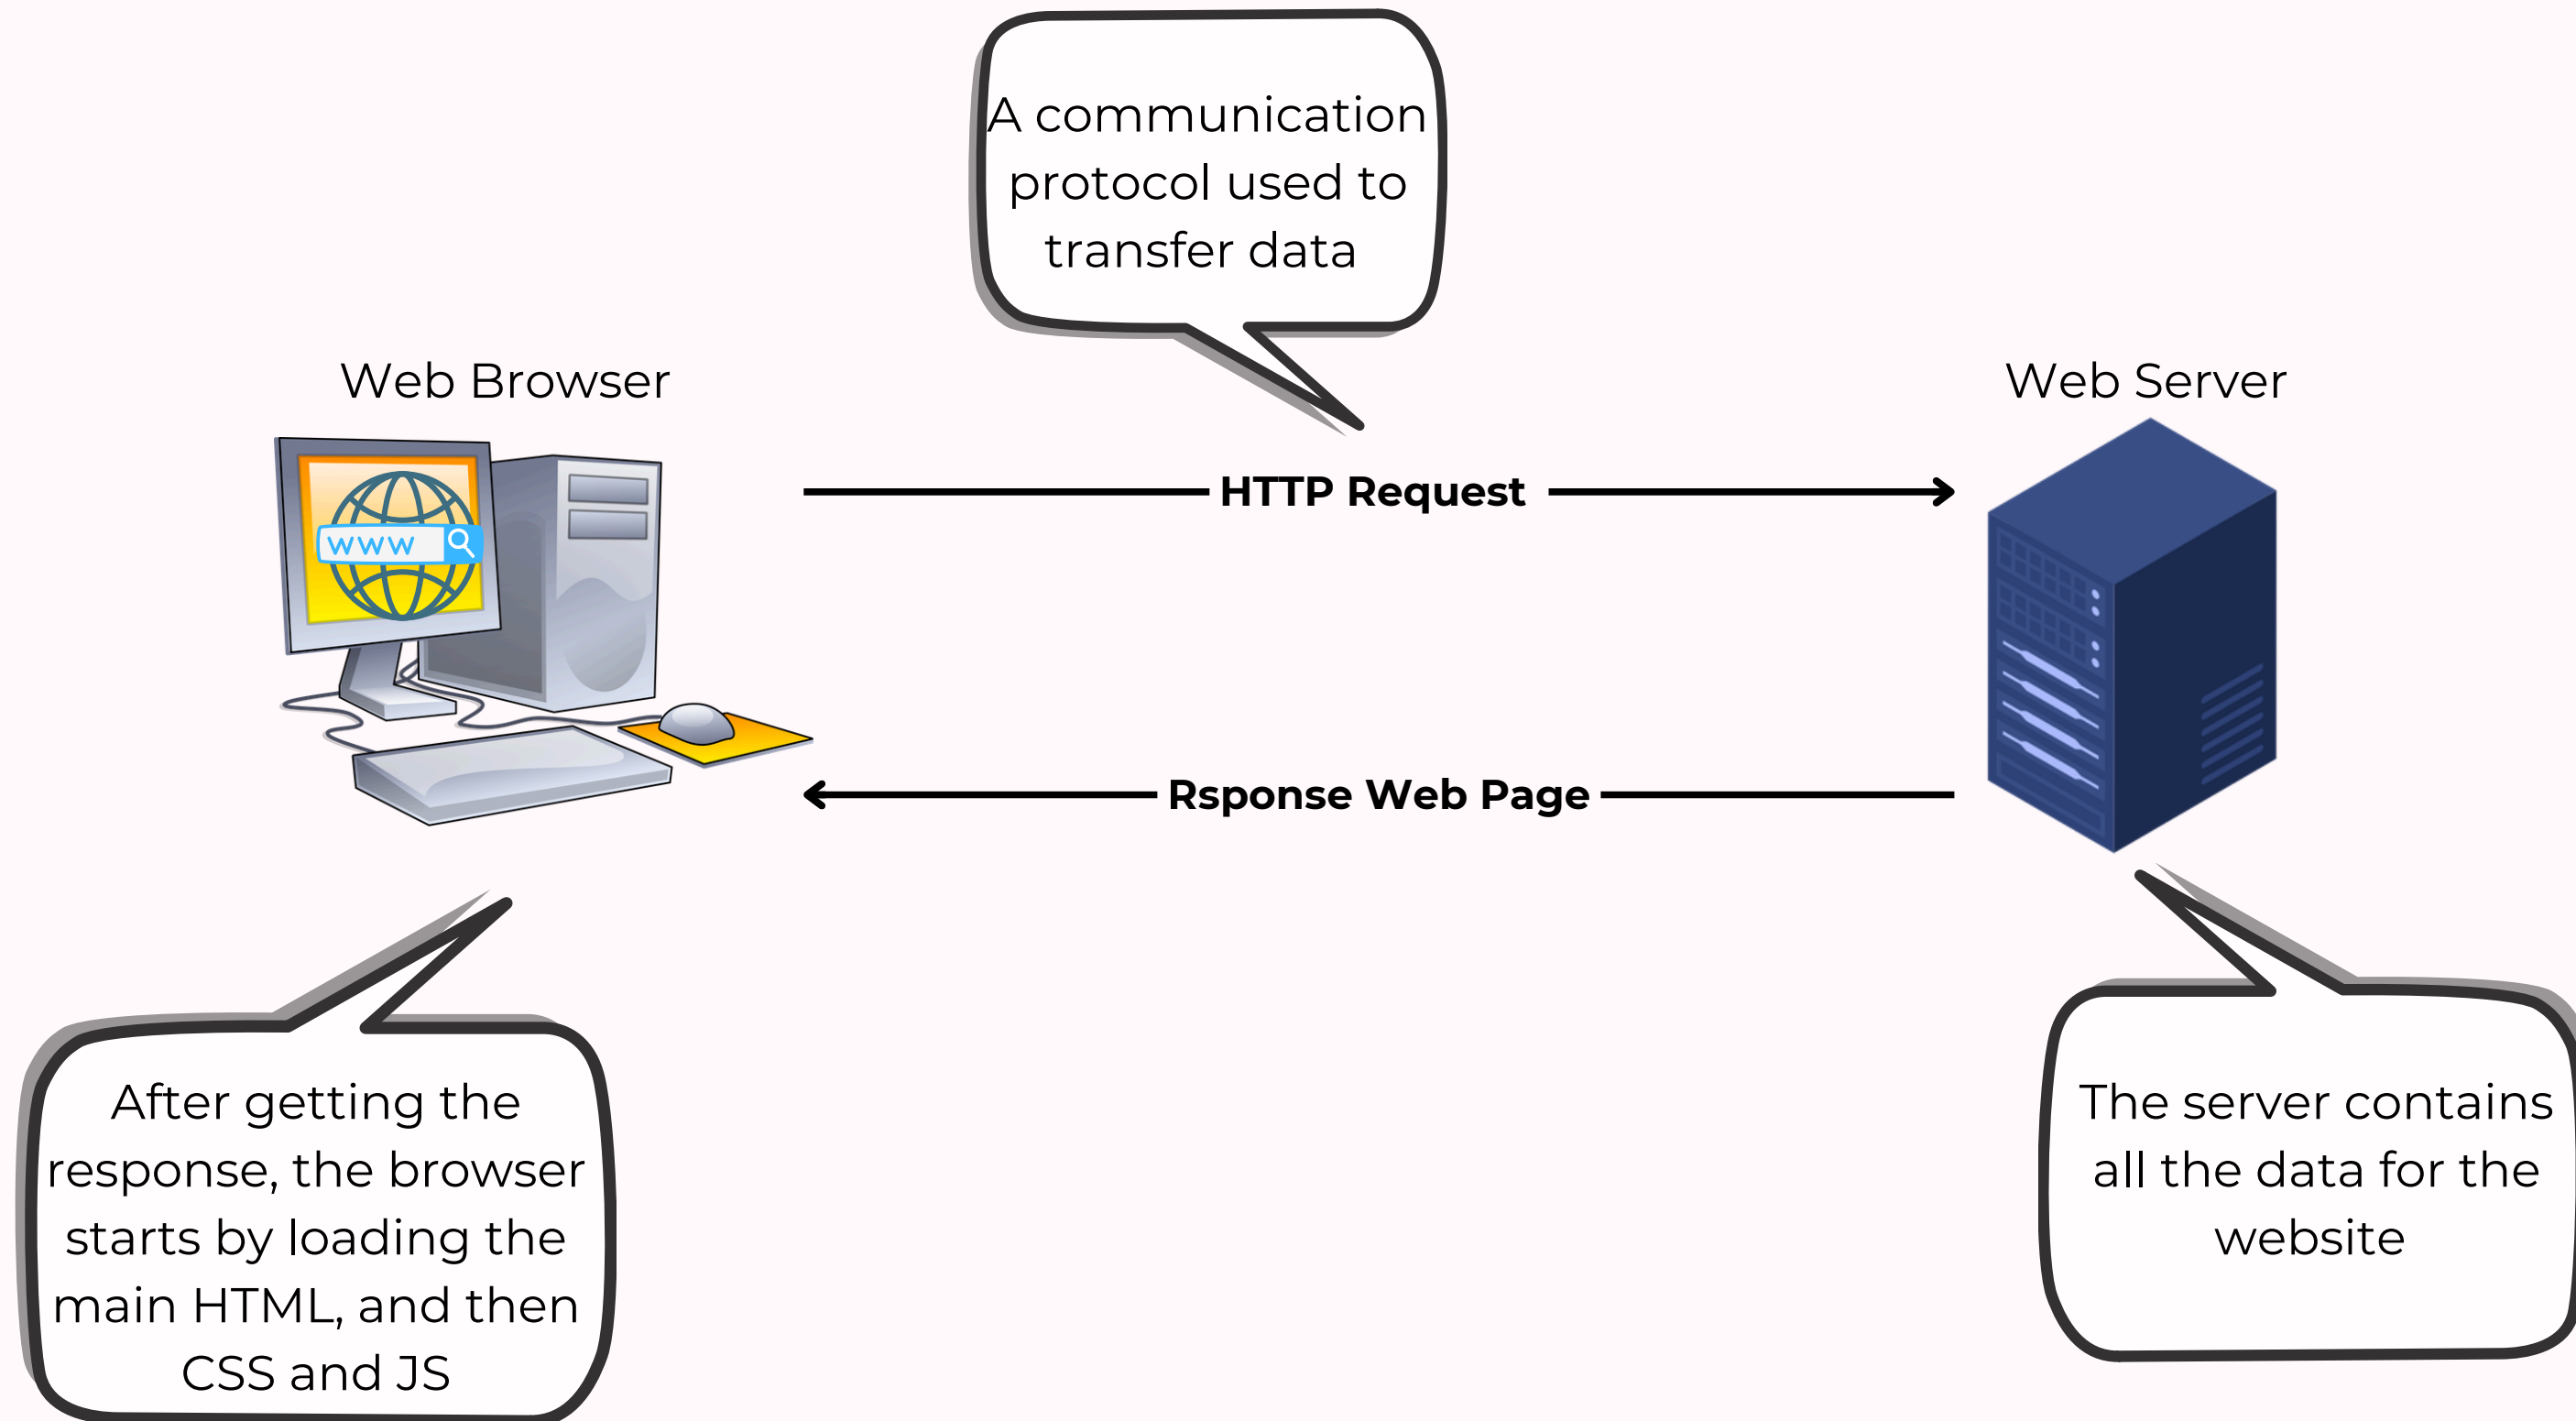

HOW DOES IT WORK ?

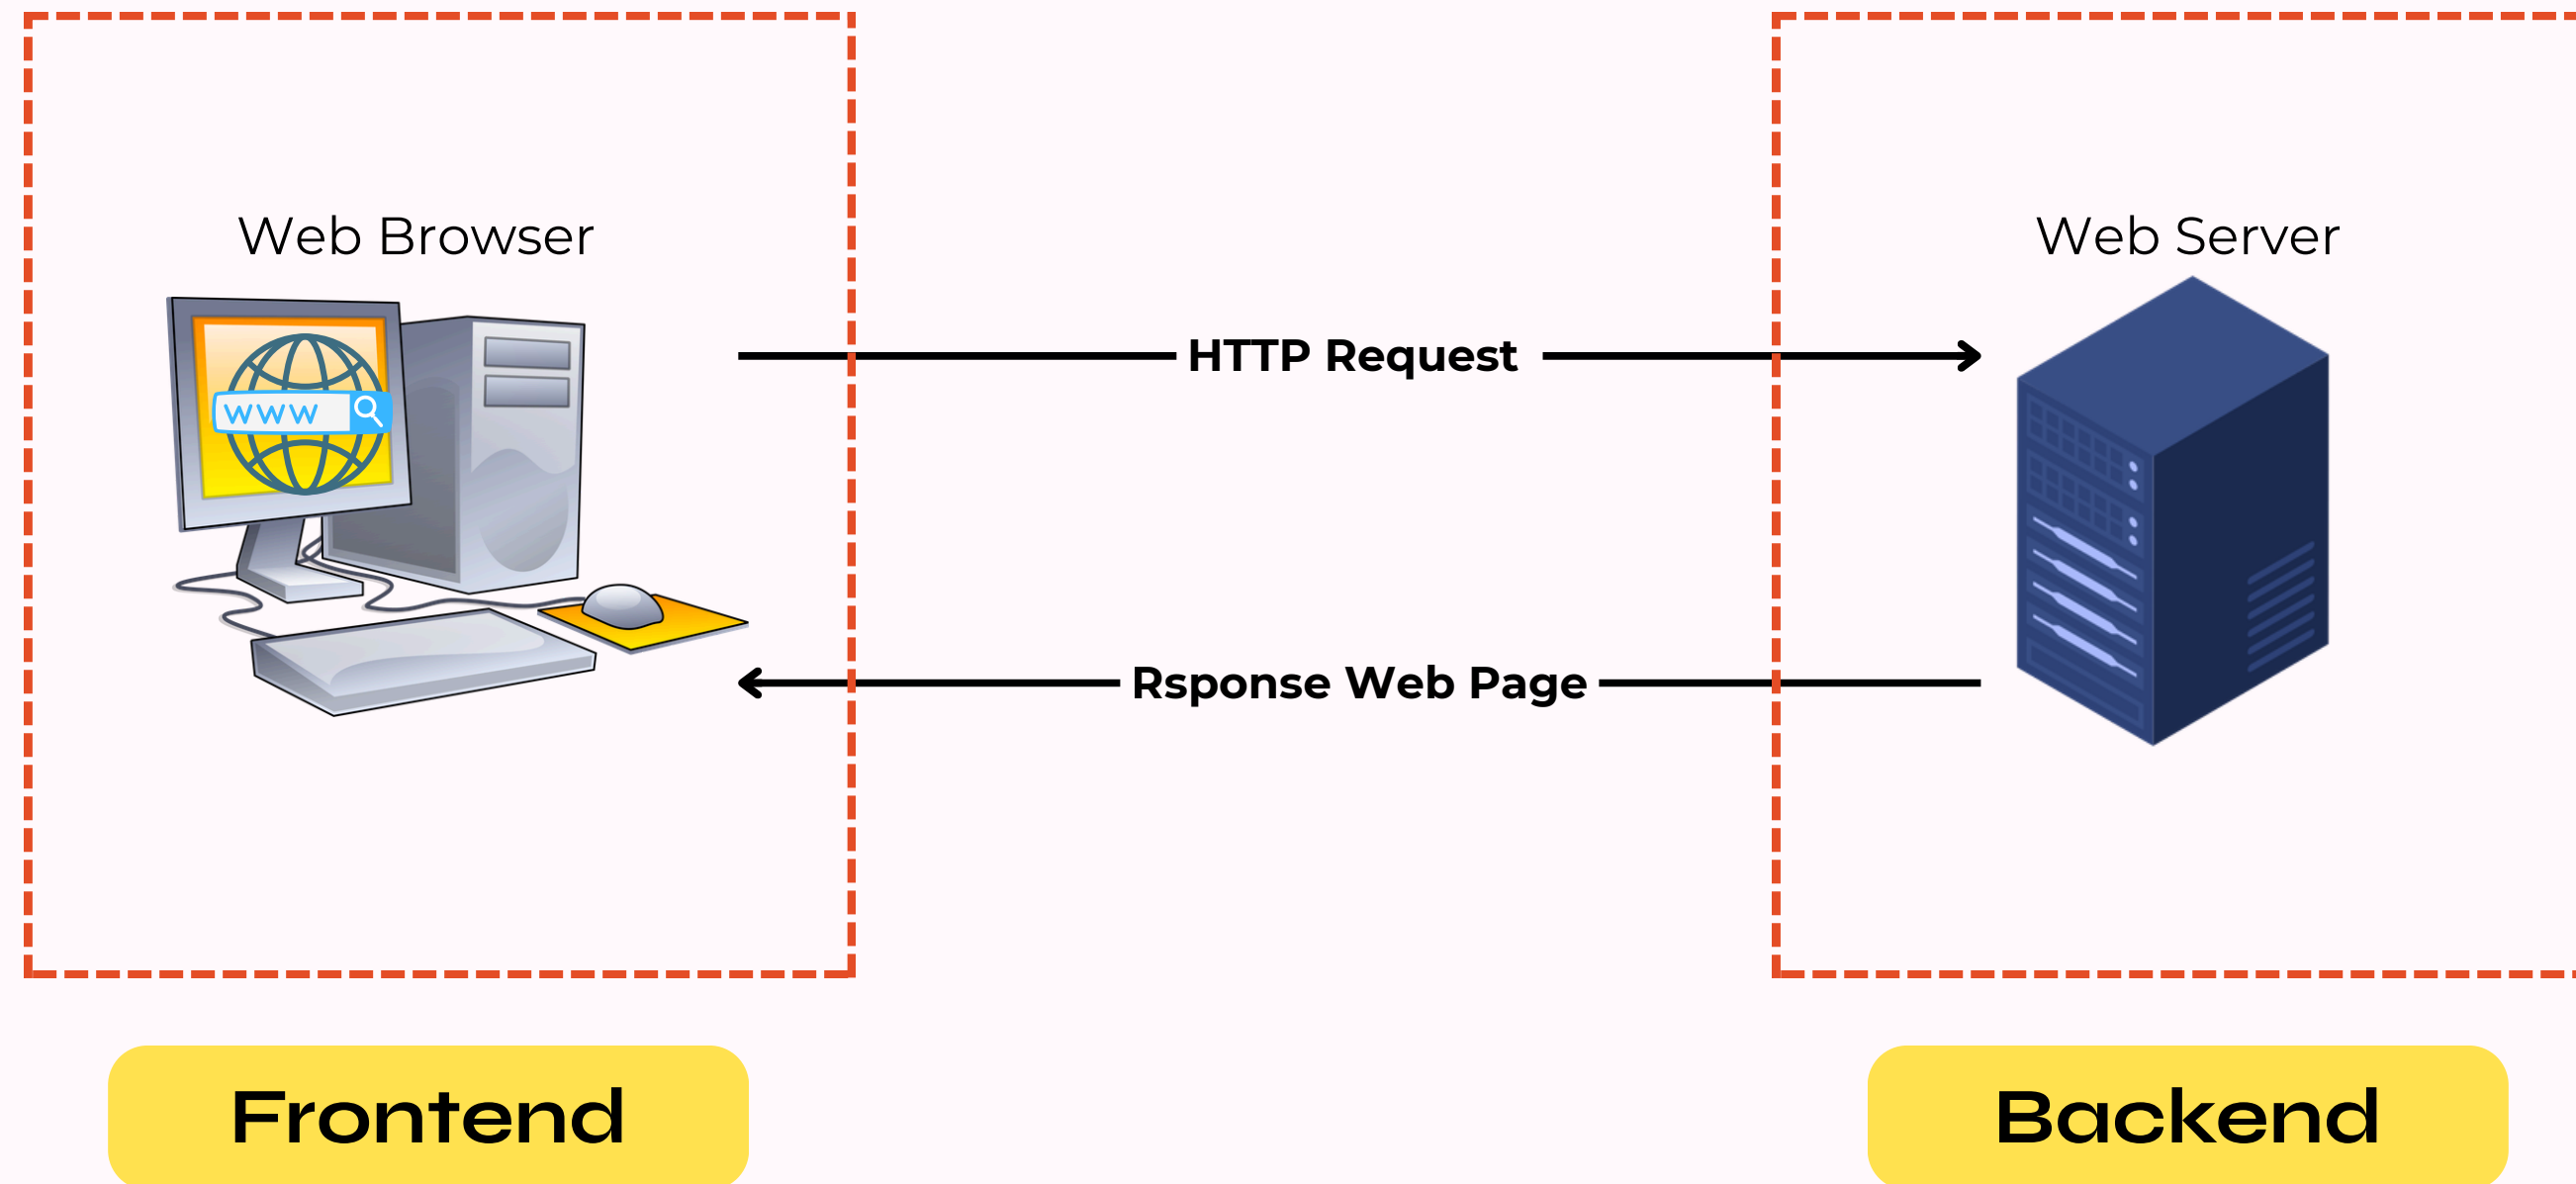

HOW DOES IT WORK ?

HOW DOES IT WORK ?

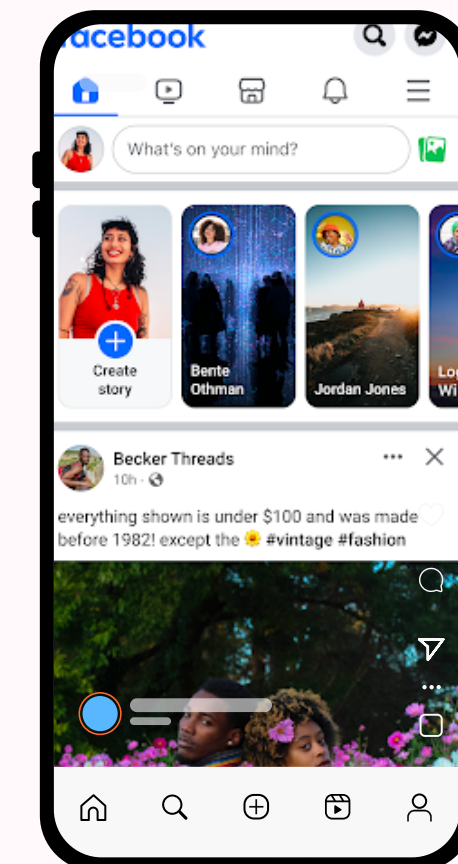

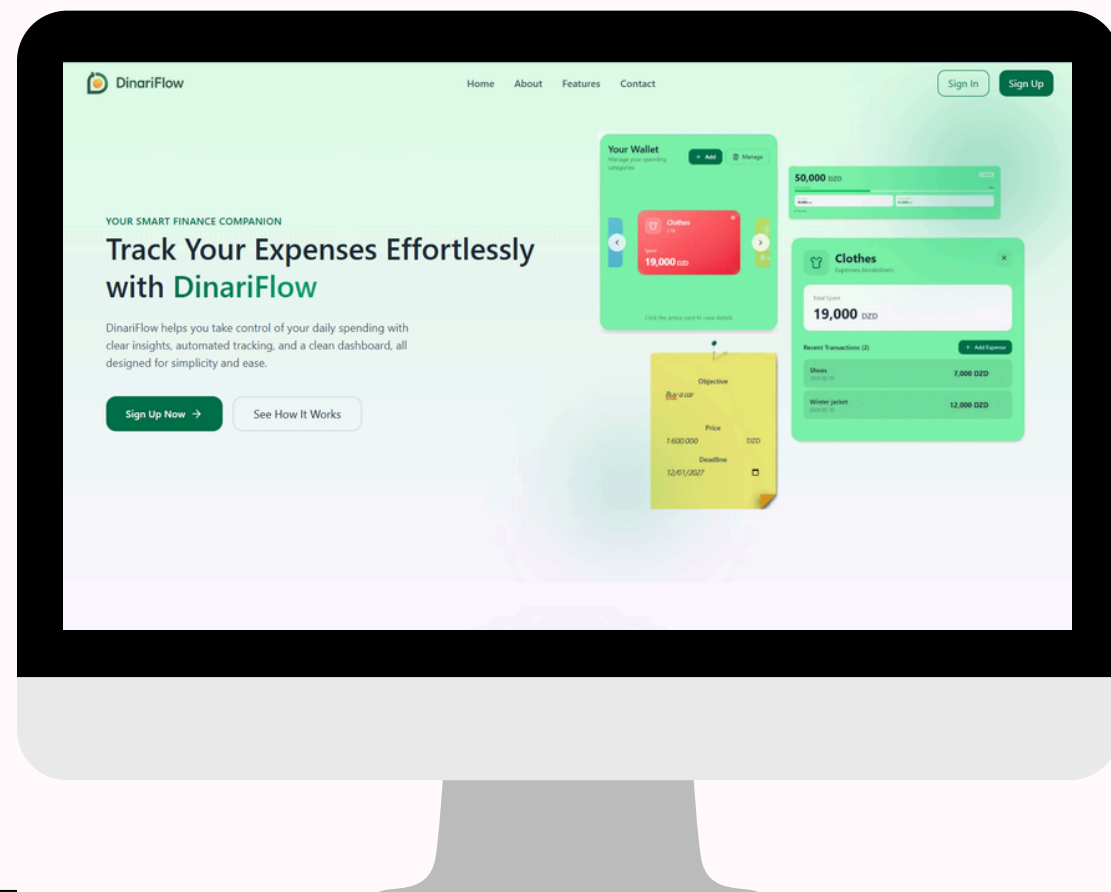

HOW DOES IT WORK ?

Frontend = Everything you **click, see, interact** with in a app.

Frontend = Everything you **click, see, interact** with in a app.

Examples: websites, dashboards, mobile apps

THE CORE TECHNOLOGIES

HTML

Used to define
the structure

CSS

Used to design
the website

Javascript

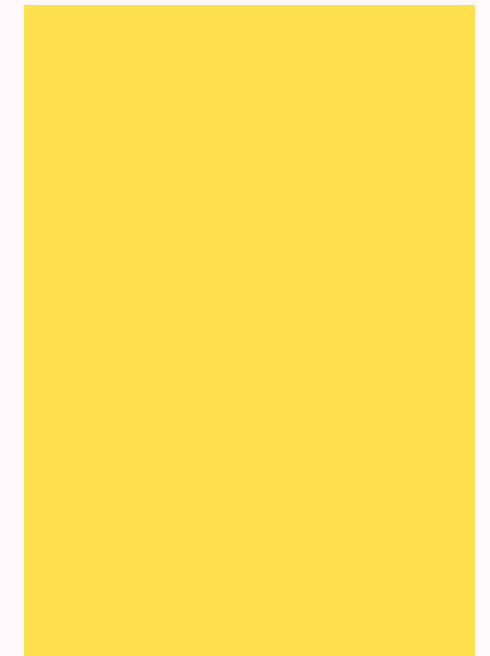

Used for
interactivity

JS

HTML

CSS

CONTENT

1. **The Web**
How does it work ?

2. **HTML**
Building the structure

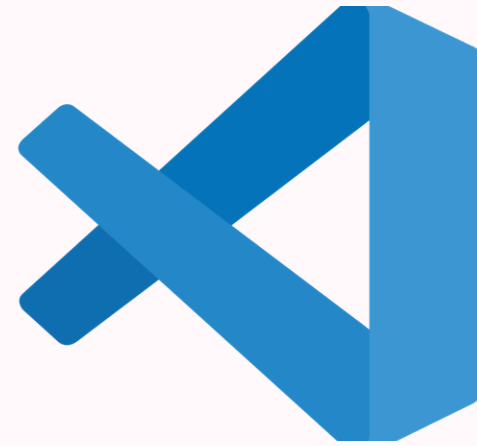

3. **CSS**
Styling the website

4. **Lets Build**
Put everything together

5. **What's Next ?**
Your next steps in web dev

6. **Conclusion**
Keep learning. Keep building

Tools Setup

VS Code

Code Editor

HTML

- HTML stands for : **HyperText Markup Language**
- Used to define the **structure** of the website .
- HTML tells the browser what each piece of content is.
- consists of a series of elements called **tags**

HTML

- HTML stands for : **HyperText Markup Language**
- Used to define the **structure** of the website .
- HTML tells the browser what each piece of content is.
- consists of a series of elements called **tags**

TAGS

Element = Opening Tag + Content + Closing Tag

 **<TAG>** content **</TAG>**

HTML

- HTML stands for : **HyperText Markup Language**
- Used to define the **structure** of the website .
- HTML tells the browser what each piece of content is.
- consists of a series of elements called **tags**

TAGS

Element = Opening Tag + Content + Closing Tag

 **<TAG>** content **</TAG>**

SOME ELEMENTS DON'T HAVE A CLOSING TAG

BASIC HTML STRUCTURE

index.html X

index.html > ...

```
1  <!DOCTYPE html>
2  <html>
3
4      <head>
5          <title>My First Web Page</title>
6      </head>
7
8      <body>
9          <h1>Welcome to my first web page</h1>
10         <p>This is my first paragraph.</p>
11     </body>
12
13 </html>
```

BASIC HTML STRUCTURE

head
info

body
visible
content

```
index.html X
index.html > ...
1  <!DOCTYPE html>
2  <html>
3
4  <head>
5    <title>My First Web Page</title>
6  </head>
7
8  <body>
9    <h1>Welcome to my first web page</h1>
10   <p>This is my first paragraph.</p>
11 </body>
12
13 </html>
```

MOST USED TAGS

TEXT

```
<h1>Heading</h1>
<h2>Subheading</h2>
<p>Paragraph</p>
```

LINKS

```
<a href="http://www.google.com">Google</a>
```

INPUTS

```
<input type="text">
<input type="date">
<input type="button" value="Click Me">
```

IMAGES

```

```

LIST

```
<ul>
  <li>Item 1</li>
  <li>Item 2</li>
  <li>Item 3</li>
</ul>
```

DIVISION

```
<div>
  <h1>This is a div</h1>
  <p>It works as a container</p>
</div>
```

And Many More ...

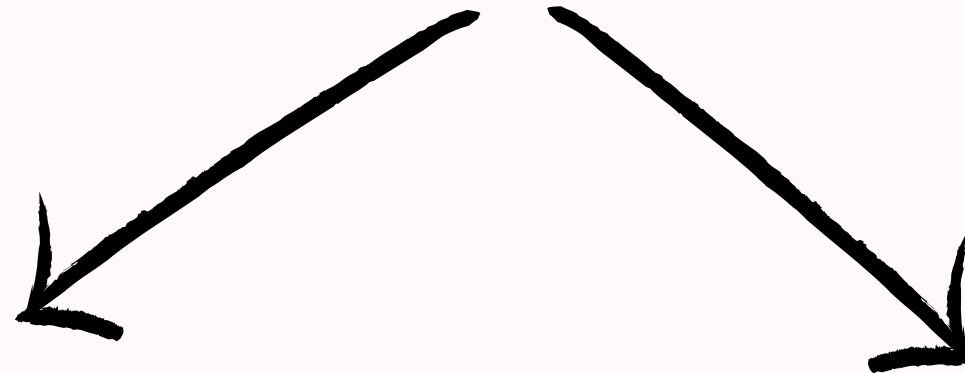

CSS Syntax

CSS has

CSS Syntax

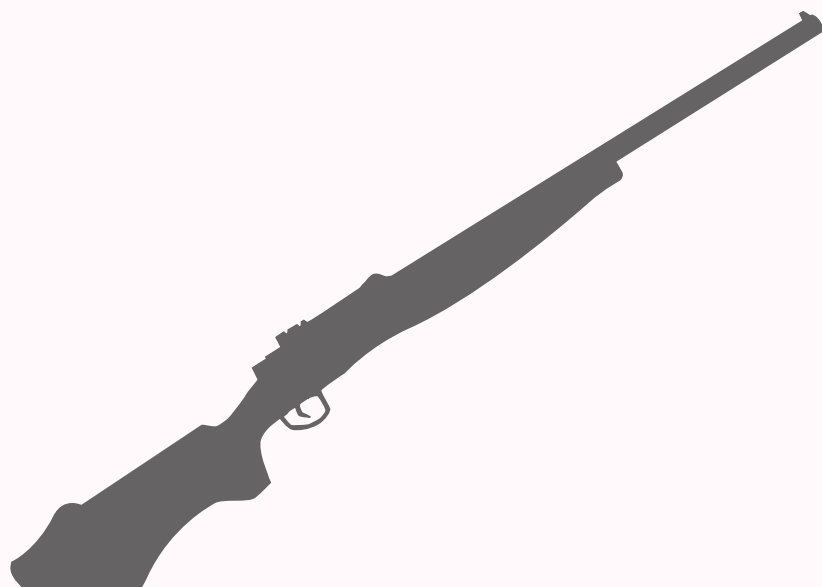

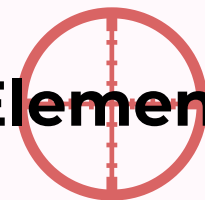

CSS has

Selectors

Selectors define which HTML elements to style

For **Targeting Elements**

CSS Syntax

CSS has

Selectors

Selectors define which HTML elements to style

For **Targeting Elements**

Properties

CSS properties (attributes) define how elements look

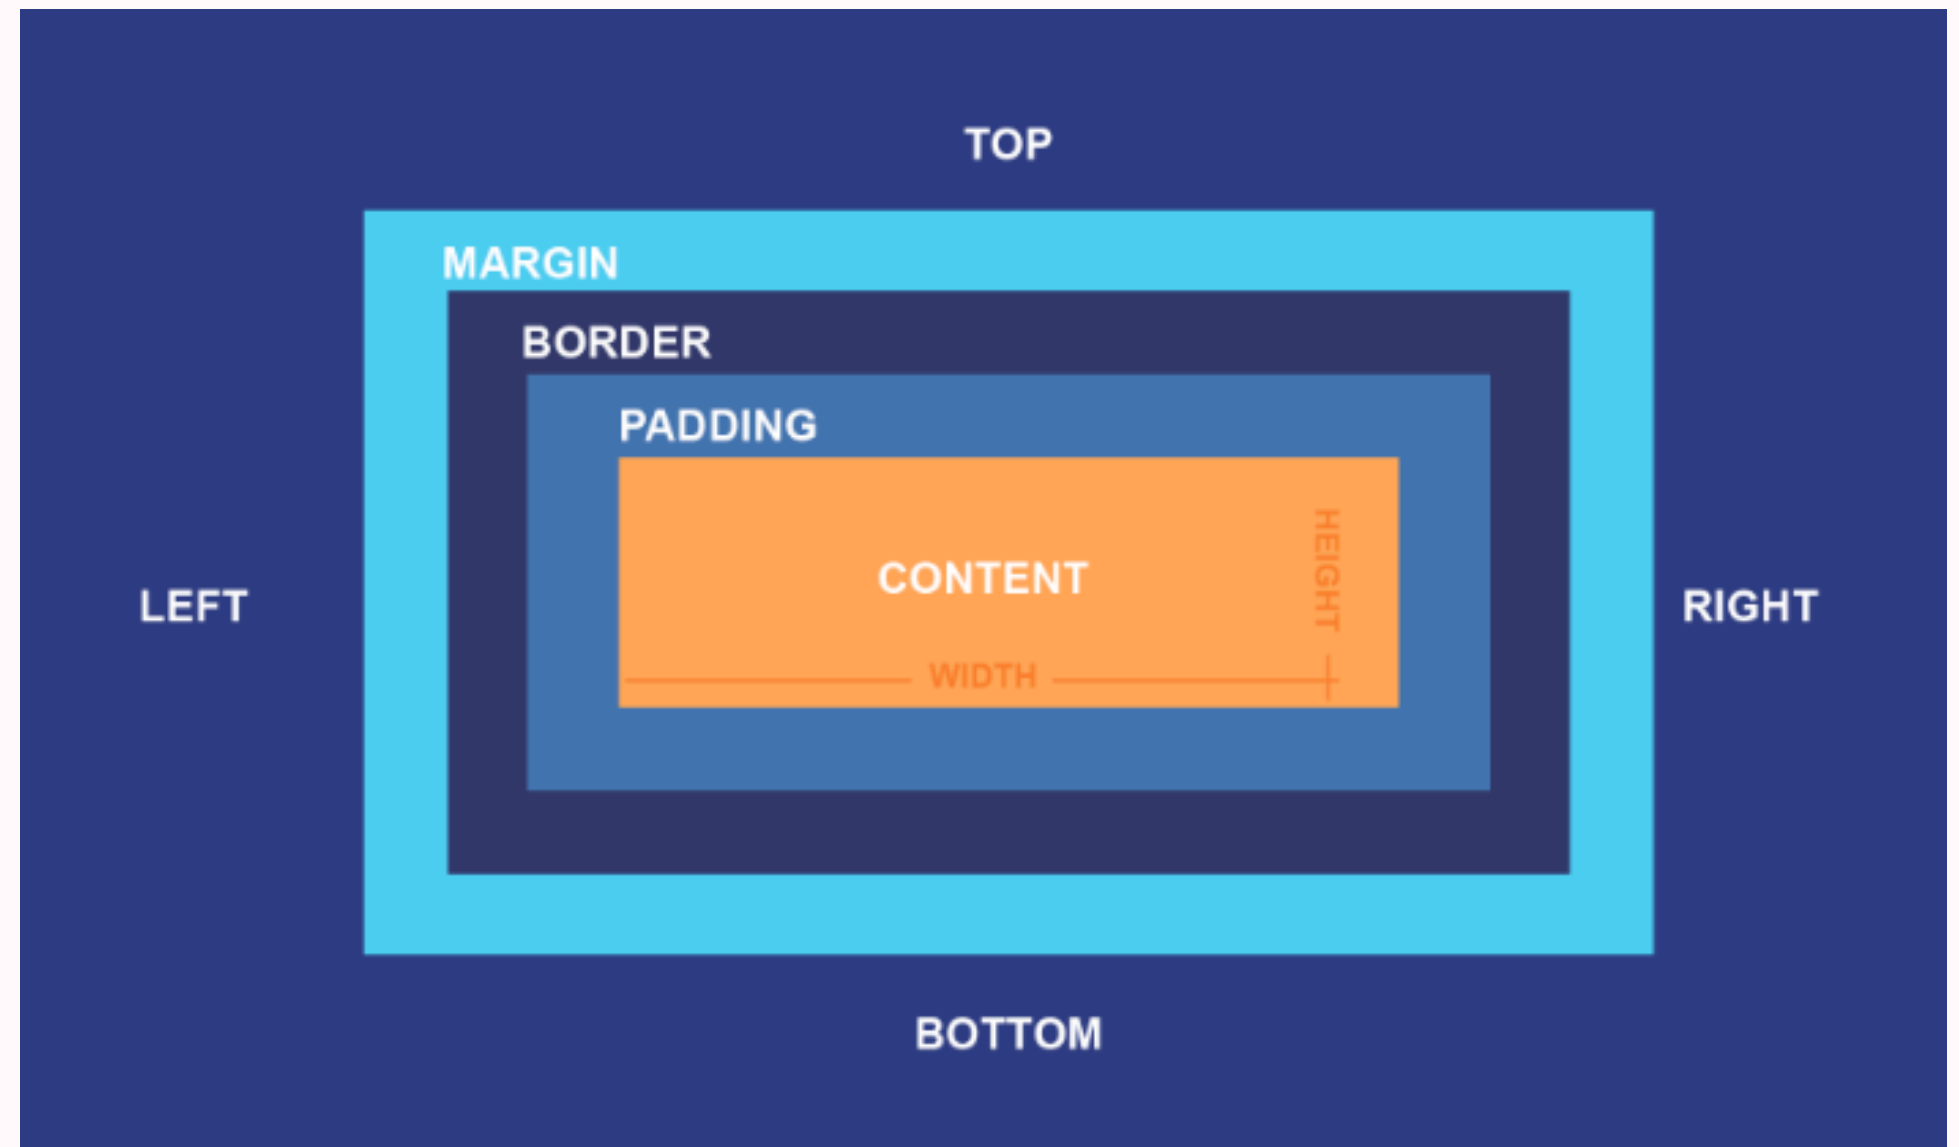

Here are some
selectors

```
p {  
  color: red;           /* Element Selector: styles all <p> elements */  
}  
  
.title {  
  font-size: 20px;      /* Class Selector: targets elements with class="title" */  
}  
  
#main {  
  text-align: center;   /* ID Selector: targets the element with id="main" */  
}  
  
h1, h2 {  
  color: darkblue;      /* Group Selector: styles multiple elements */  
}  
  
div p {  
  color: green;         /* Descendant Selector: targets all <p> inside <div> */  
}  
  
* {  
  margin: 0;  
  padding: 0;          /* Universal Selector: targets all elements */  
}
```

THE BOX MODEL

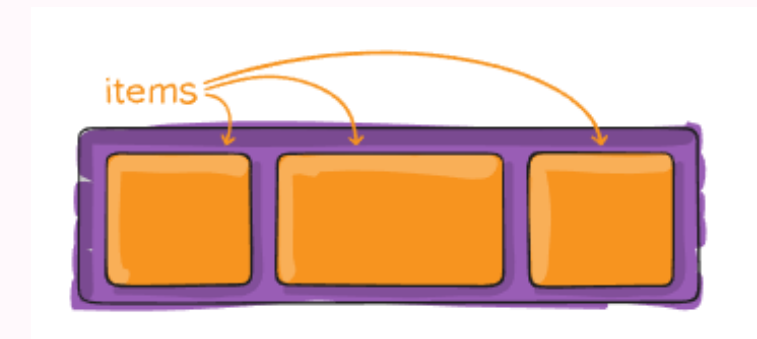

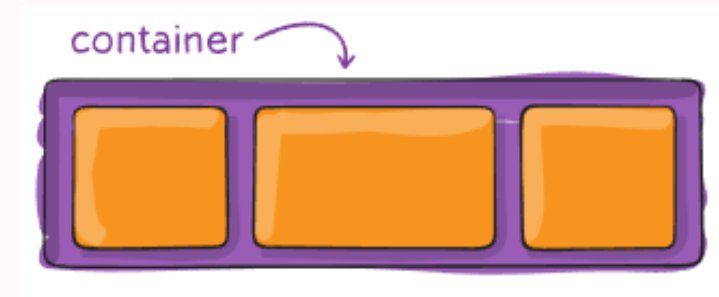

Every element in CSS is a box with:

- **Content** (text, image, etc.)
- **Padding** (gap between content and border)
- **Border**
- **Margin** (gap between box and parent container)

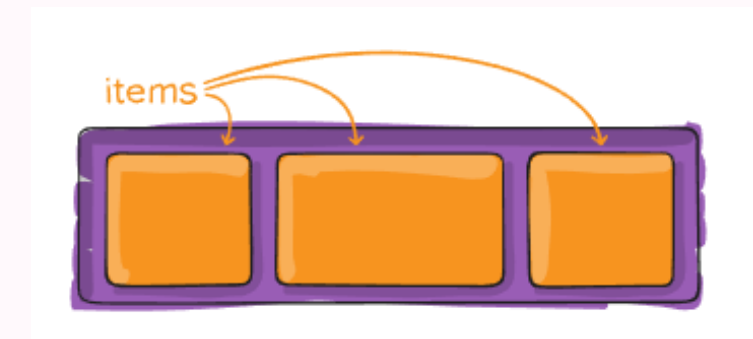

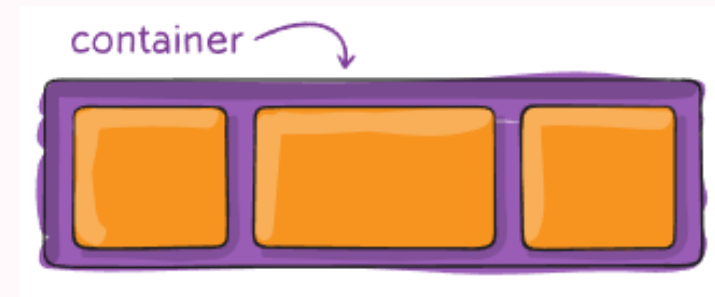

FLEXBOX

- Flexbox helps us arrange elements.
- It lets us control how **elements are positioned** inside a **container**.

FLEXBOX

- Flexbox helps us arrange elements.
- It lets us control how **elements are positioned** inside a **container**.

This is an HTML code, it has a container that contains 3 items

```
<div class="container">  
  <div class="item">Item 1</div>  
  <div class="item">Item 2</div>  
  <div class="item">Item 3</div>  
</div>
```

FLEXBOX

THE 5 PROPERTIES YOU NEED

display: flex

Turns the container into a Flexbox.

justify-content

Controls **main-axis** positioning.

align-items

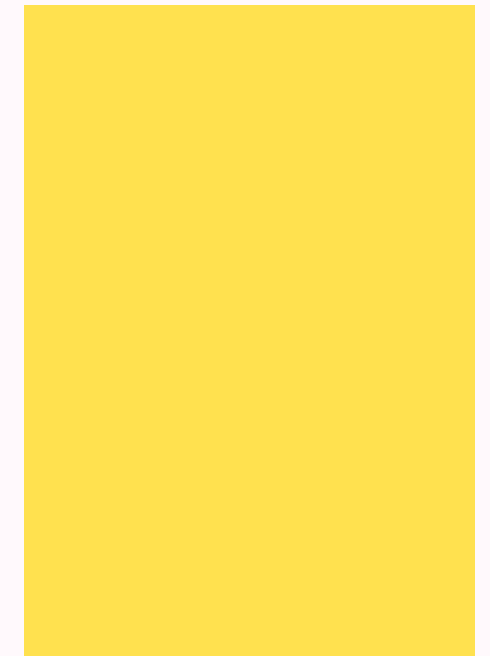

Controls **cross-axis** alignment.

flex-direction

Put items on a **row** or **column**

gap

Controls the **space** between elements.

CONTENT

1. **The Web**
How does it work ?

2. **HTML**
Building the structure

3. **CSS**
Styling the website

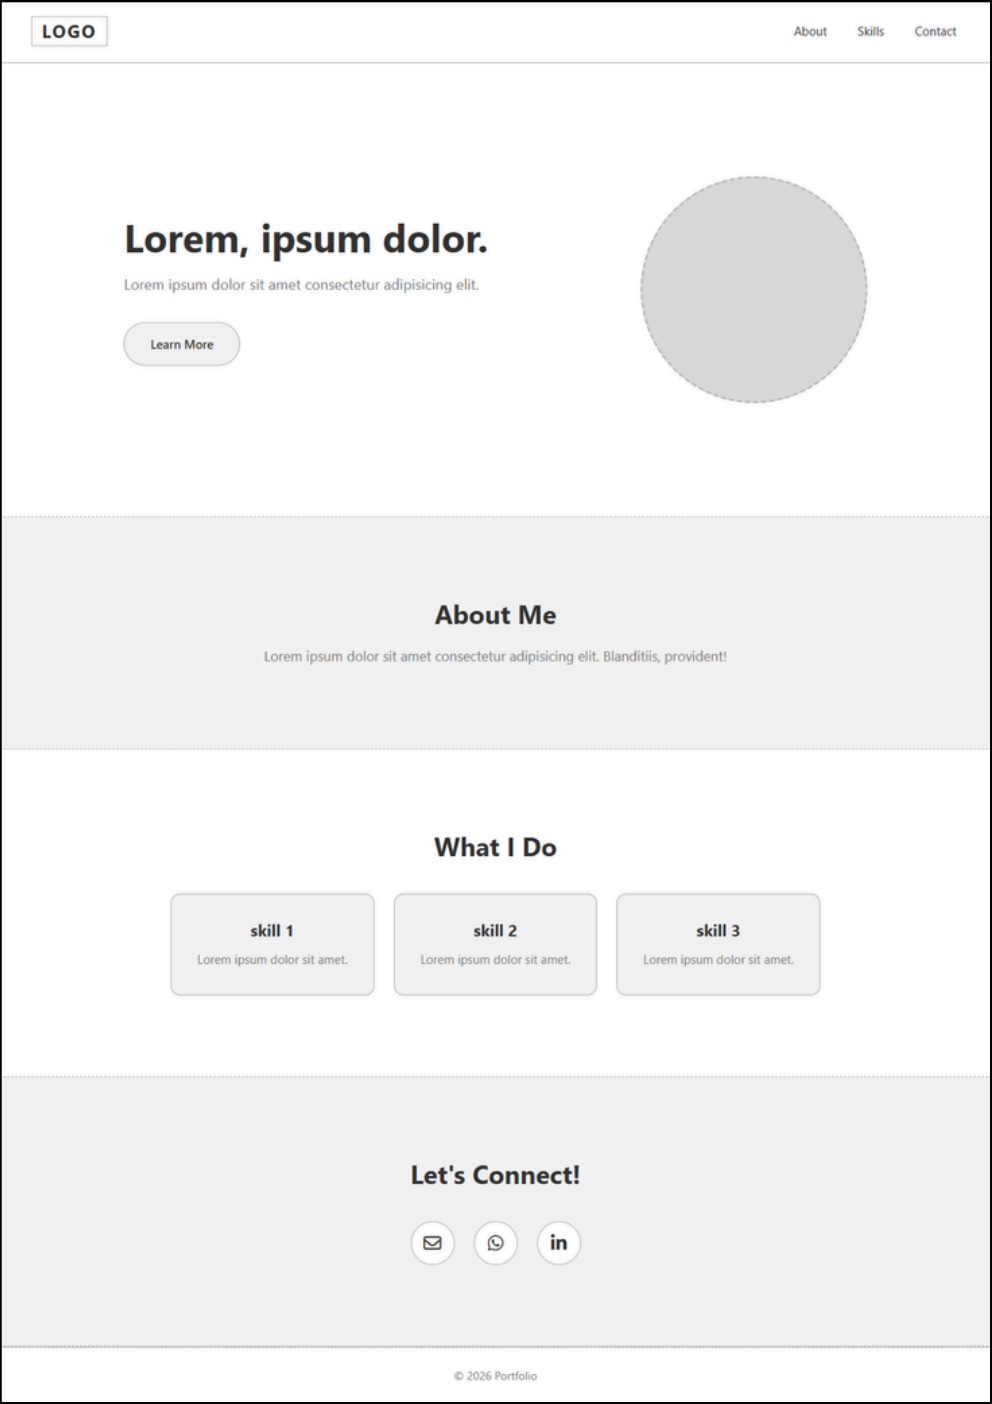

4. **Lets Build**
Put everything together

5. **What's Next ?**
Your next steps in web dev

6. **Conclusion**
Keep learning. Keep building

LET'S BUILD

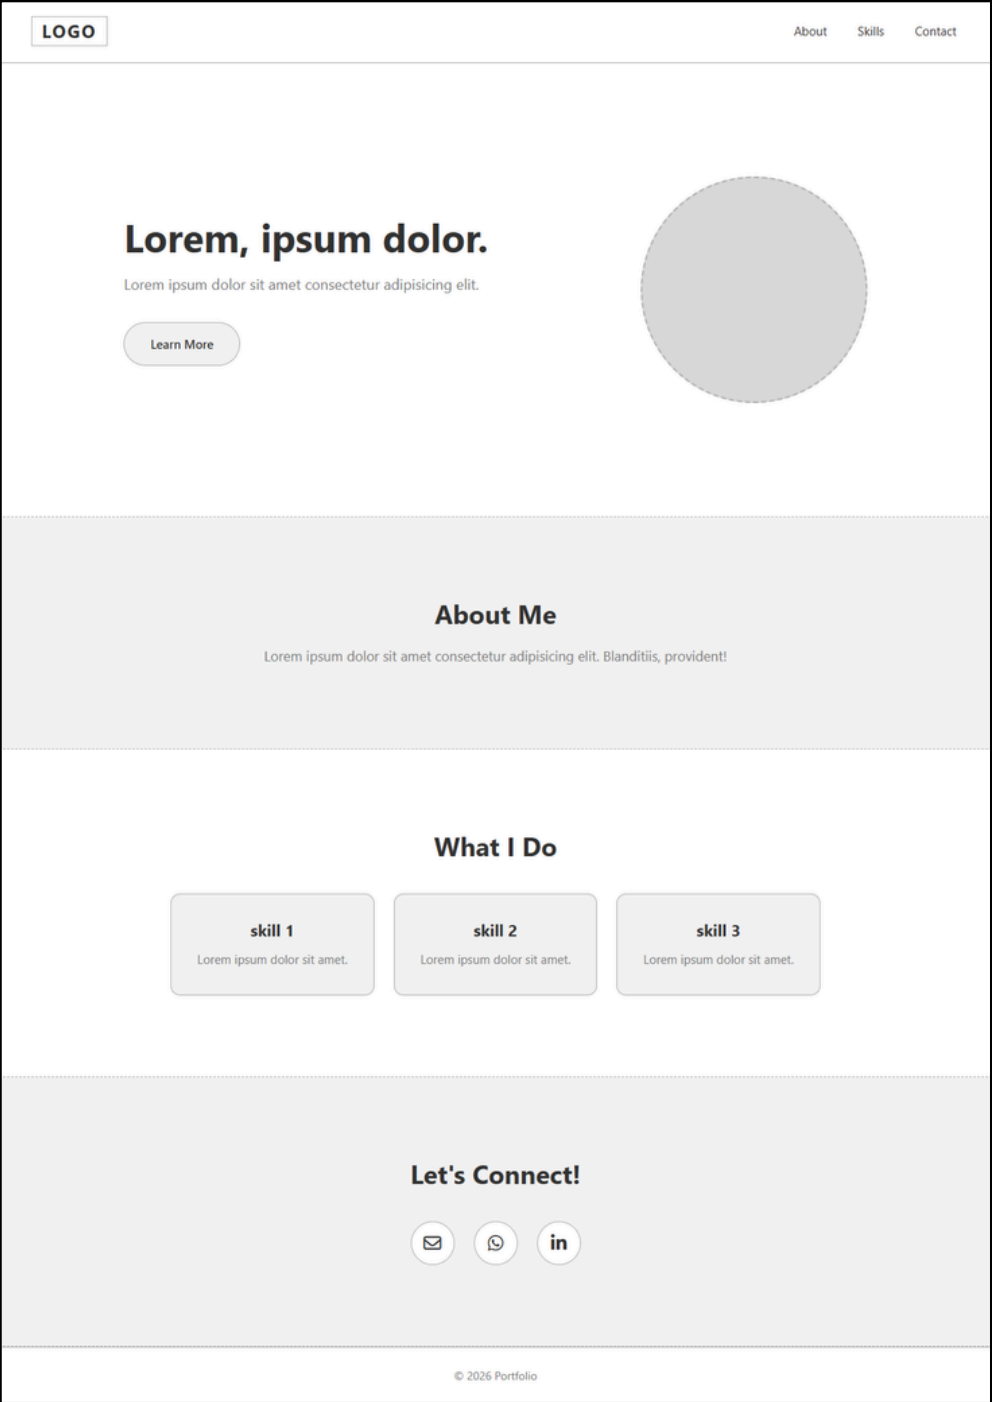

Let's put everything we've learned together and create a personal portfolio using HTML & CSS.

LET'S BUILD

Let's put everything we've learned together and create a personal portfolio using HTML & CSS.

Our portfolio will have 6 sections

LET'S BUILD

You can find the whole project (HTML & CSS code) here :

Portfolio

CONTENT

1. **The Web**
How does it work ?

2. **HTML**
Building the structure

3. **CSS**
Styling the website

4. **Lets Build**
Put everything together

5. **What's Next ?**
Your next steps in web dev

6. **Conclusion**
Keep learning. Keep building

WHAT'S NEXT

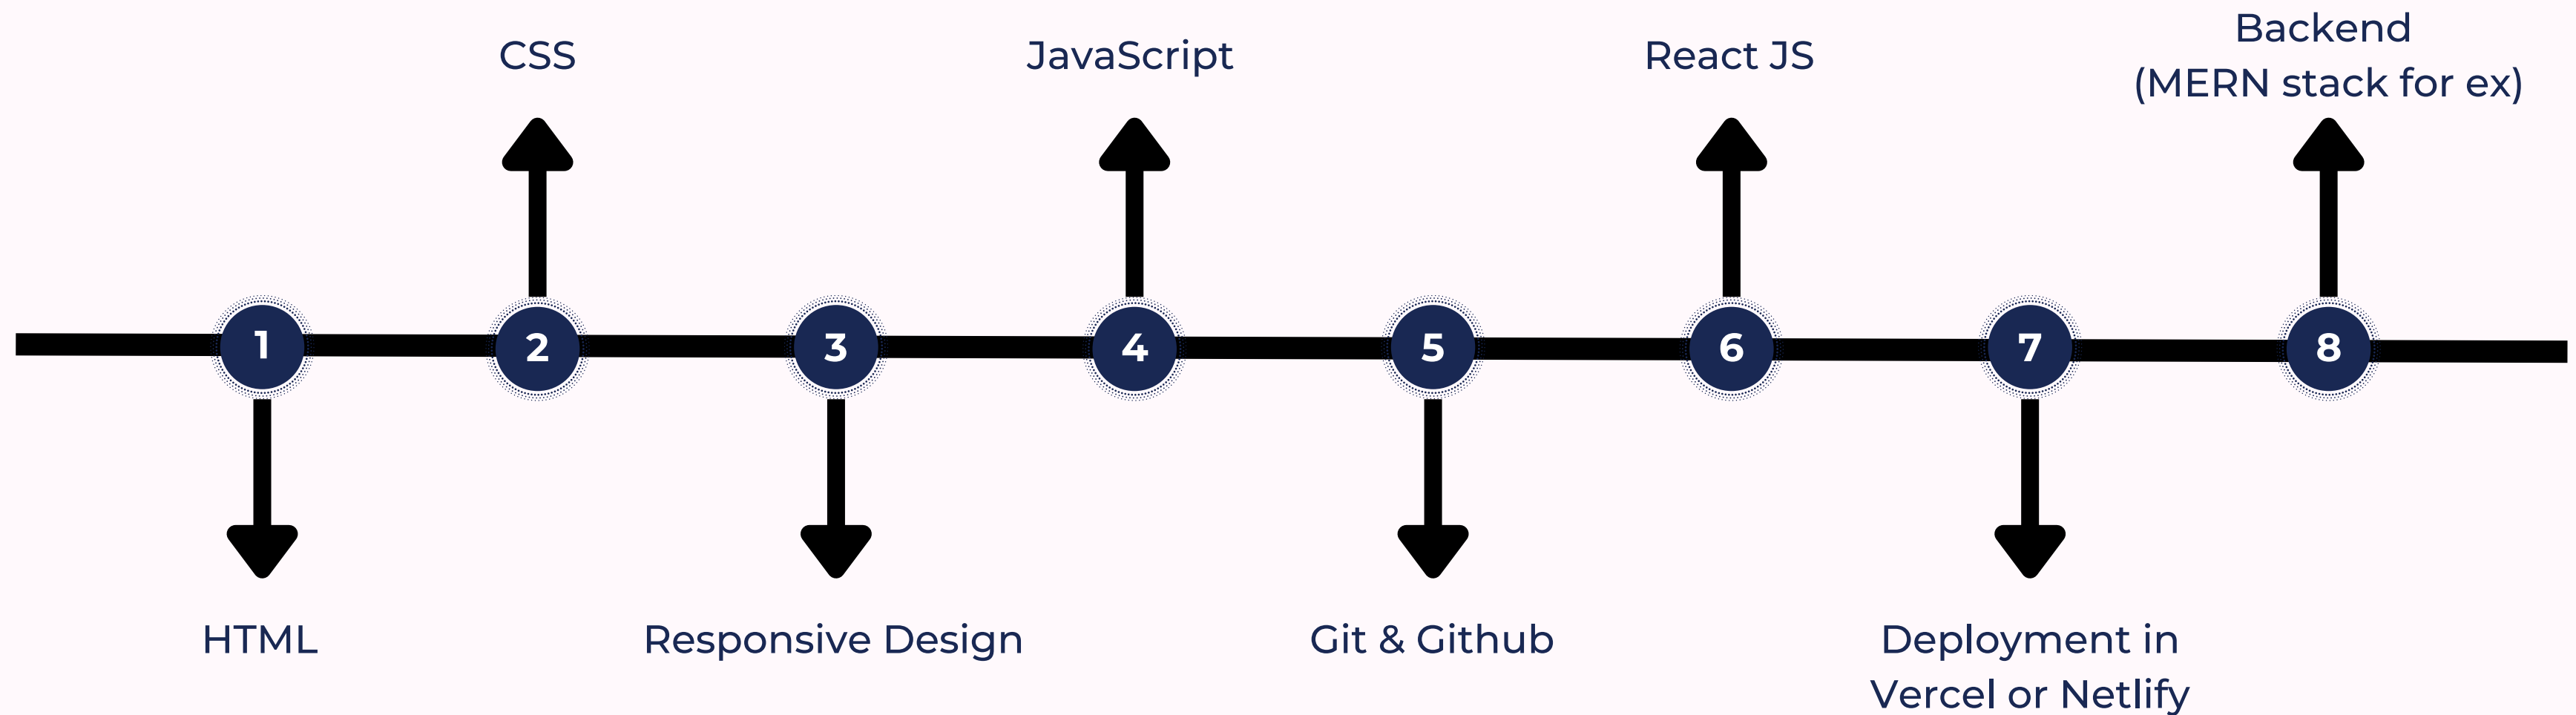

Congrats! you created your first website, but this is just the beginning.

Now you know:

- How **web** works
- **HTML** for structuring
- **CSS** for styling

Here are the next thing to explore:

WHAT'S NEXT

CONTENT

1. **The Web**
How does it work ?

2. **HTML**
Building the structure

3. **CSS**
Styling the website

4. **Lets Build**
Put everything together

5. **What's Next ?**
Your next steps in web dev

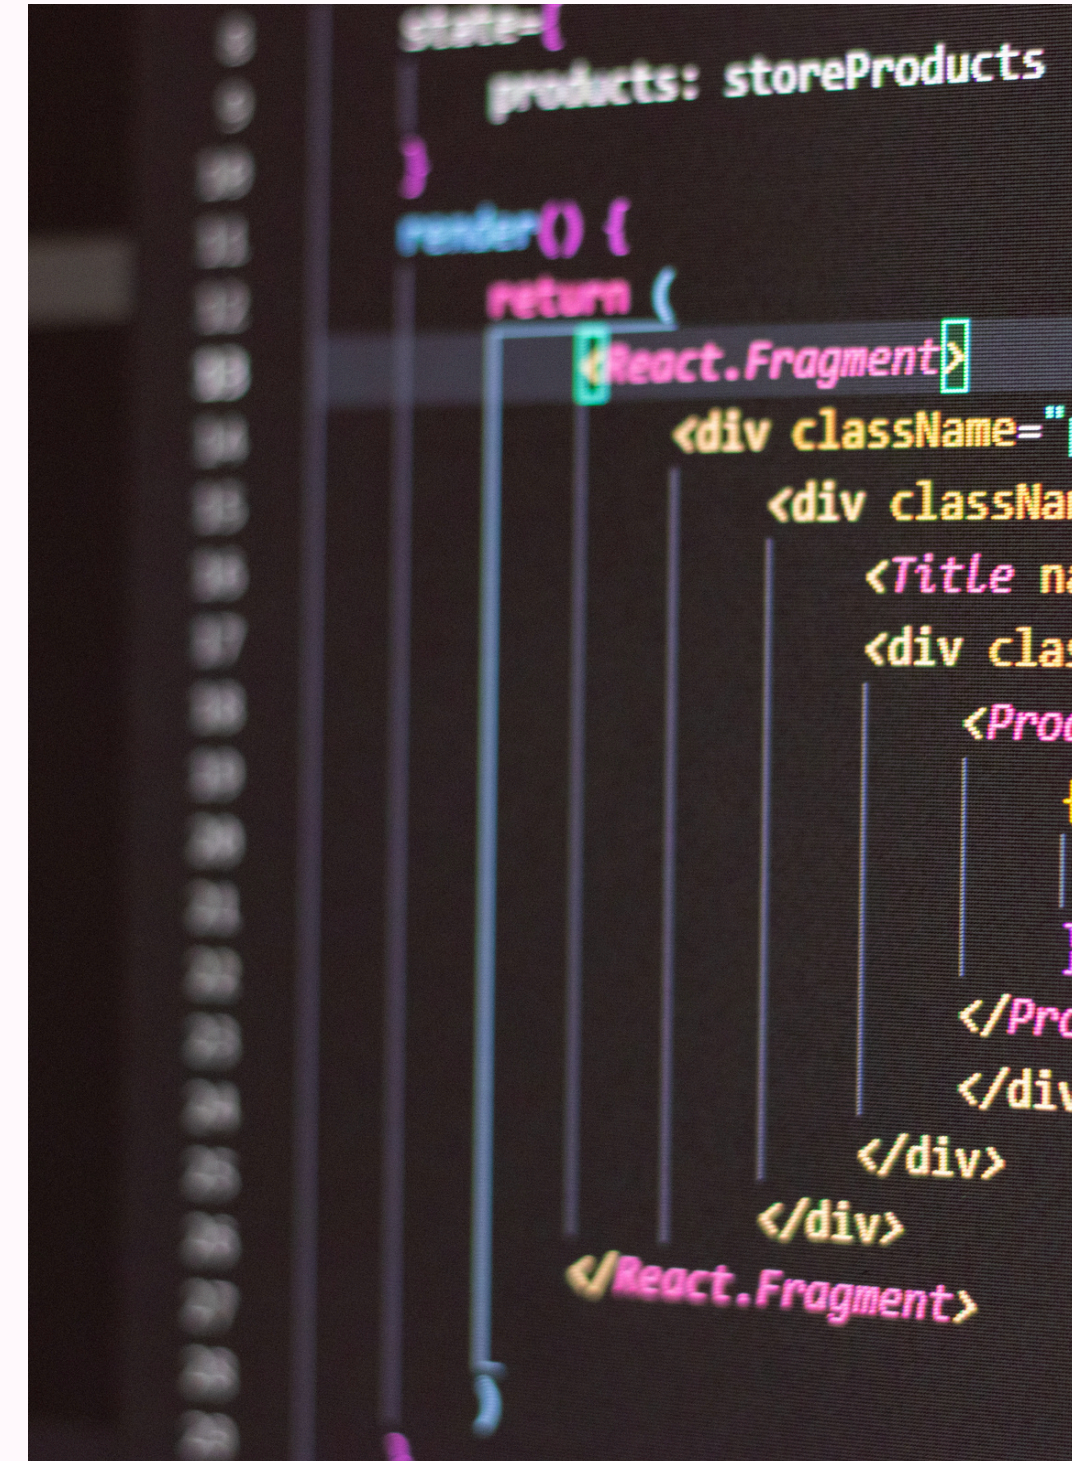

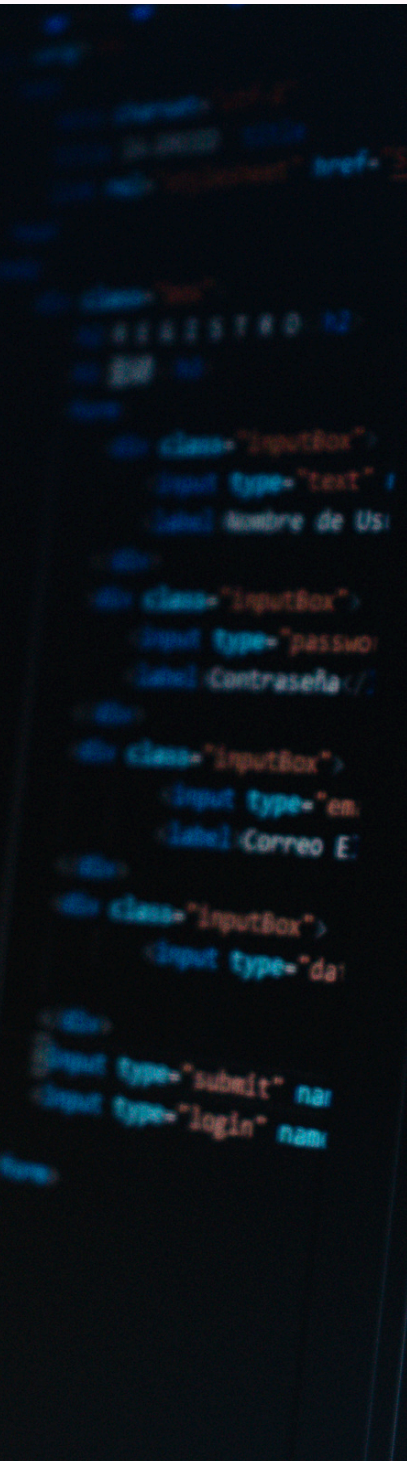

6. **Conclusion**
Keep learning. Keep building

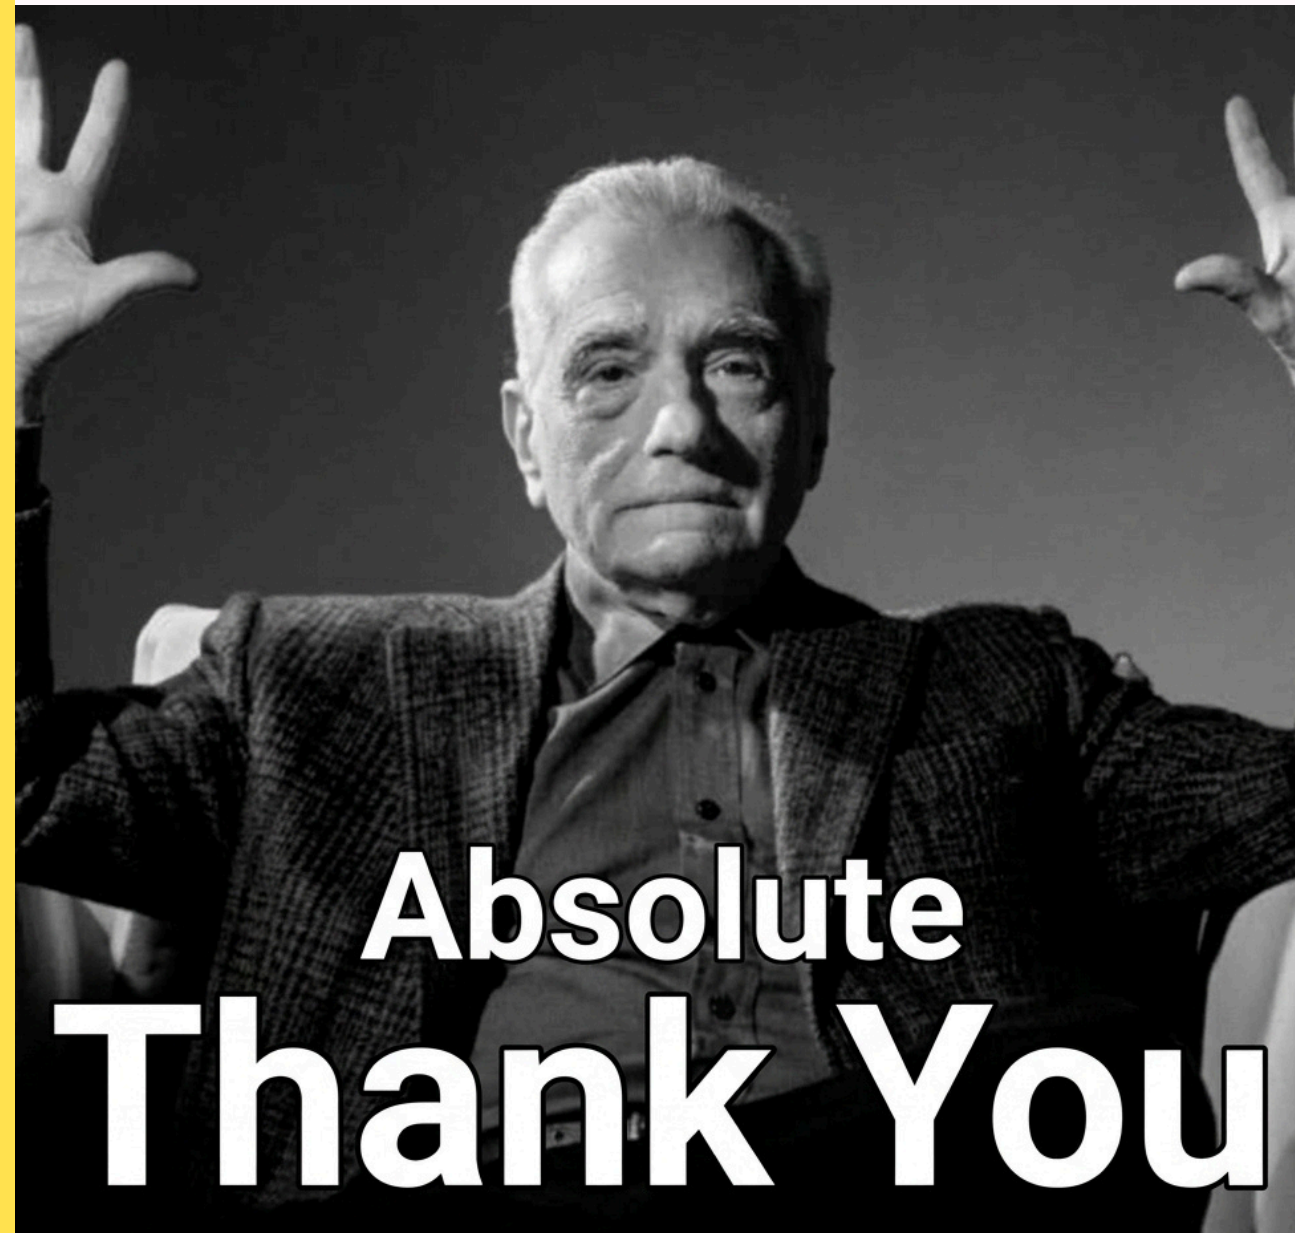

CONCLUSION

Build. Build. Build.

You don't become a developer by learning concepts & watching tutorials forever.

You become one by building, by making small things consistently everyday over a long period of time

THANK YOU.

Thank you for your time, and I hope this is the beginning of your journey into web development.
